Project Management Pack is a collection of materials used to conduct an extensive interview, design a project storyboard; and then develop, deploy and market a project. Project Management Pack is intended to be used as the first step in the process of interviewing a client (or gathering information for internal projects) to assist in writing a business proposal or project design.

# Web Development Integration Guide

**Project Name:** \_\_\_\_\_ **Last Revision:** \_\_\_\_\_

This worksheet outlines the pages of the website in greater detail. It is meant to aid development of the project and serve as a “roadmap” to tie in front-end features to back-end processes. The descriptions and classifications used in this worksheet with help to lay out the exact solution for development in order to meet all of the Software Requirements Specification (SRS) for the project.

<b>Definitions:</b>	
<b>Page Name</b>	The “friendly” name of the page, such as “Services”.
<b>Navigation Element</b>	Here you describe the navigational elements this page belongs to, or is accessed from. Terms such as “Main” or “Sub-Navigation” are understood to have been previously defined or decided upon by the time a document like this is required.
<b>Page Category</b>	Here you indicate whether this page belongs under a certain section or classification – such as ADMIN or “Sub-Navigation”. The Categories you choose should have some logical meaning and context to the end user of this document.
<b>Template Used</b>	If a specific template is called upon, you would list that here.
<b>File Name</b>	The exact file name of the page being described. In the case of a data-driven page, you note the control file (e.g. index.php) and any additional information about the page and file structure that is different. (such as (option=com_content&task=view&id=15&Itemid=46) – and then you would need to define any functions in the above url if they are important to the description of the page and its functionality.
<b>Access Role Used</b>	Describe the access role(s) used to interact with this page. Access roles are used to restrict certain features to certain users. Example: Your project or website may have roles such as : Public (Everyone), Registered Users (Users who have given you certain information and you allow them to create an account with a login and password to access more features)
<b>Dependencies</b>	Here you list any important files or data that this file calls in order to function. These can be includes, XML feeds, scripts or other resources.
