

PROPOSAL KIT SAMPLE

Manufacturing Process Improvement Sample Proposal

Scroll down to read the first part of this sample. When purchased, the complete sample is 9 pages long and is written using these Proposal Pack chapters:

Cover Letter, Title Page, Table of Contents, Observations, Conversion Plan, Meetings, Recommendations, Project Process Summary

This sample was created using **Proposal Pack Concepts #1**. In the retail Proposal Pack you get the entire collection of samples (including this one) plus thousands of editable templates for creating an unlimited variety of custom proposals and other business documents.

[Click here to purchase Proposal Pack Concepts #1](#)

The sample below **does not** include all of the sample's content. The complete version is included in every retail Proposal Pack product and must be purchased to see the rest of the content and to get the editable Word format version.

Bob Millings
CEO
Lakota Cardboard

Dear Bob,

You asked me to undertake a study of our manufacturing process with the intention of improving it any way we can so we could be more competitive. To this end, I hired Industry Consultants Inc., a group of efficiency consultants who have two experts in paper manufacturing processes on their staff.

This packet includes their findings and recommendations and my recommended plan. I think you'll be pleased.

Sincerely,

Maria Walters
Vice President

MANUFACTURING PROCESS EFFICIENCY IMPROVEMENT

Prepared for: Bob Millings
CEO

Prepared by: Maria Walters
Vice President

We hired Industry Consultants Inc., a group of efficiency consultants who have two experts in paper manufacturing processes on their staff to assist in improving our manufacturing process.

Based on observations and analysis of our manufacturing process, Industry Consultants Inc. recommended that we purchase the Efficient Cardboard Manufacturing (ECM) software program and that we computerize job scheduling and operation of the cutter.

Recommendations.....	7

Industry Consultants Inc. made the following observations about our manufacturing process at Lakota Cardboard.

On September 3 and Sept 4, two industrial engineers—Lynda Burqhart and Patrick Littlehorse—who specialize in paper product manufacturing, walked around the manufacturing floor with stop watches and video cameras and studied our process.

These are their observations:

 **The most time-consuming part of the process is changing the paper rolls on the corrugator.**

Situation: Three rolls of kraft paper must be loaded onto the corrugators at the beginning of each job, and sometimes new rolls must be loaded when one runs out. At the end of a job, usually one or more of the paper rolls must be switched out for a different weight of paper.

For each loading process, a forklift operator must drive to the storage area, retrieve the correct roll of paper, transport it back to the corrugators and load it. This process typically takes 20 to 35 minutes. For each swap process, the paper roll must be removed from the corrugator, transported back to the storage area, and then a new roll must be selected, transported, and loaded. A swap process typically takes 45 to 50 minutes. Because of the extreme weight and size of the paper rolls, transporting and loading or removing the paper rolls is a dangerous and time-consuming job; for safety reasons, almost all other work must stop in the area while paper is transported, loaded, or unloaded.

Significance: Because swapping paper rolls happens multiple times during a manufacturing shift, the process of moving the paper rolls causes a lot of down time among the workers on the manufacturing floor.

Remarks/Recommendations: Using the new ECM software program, specifications for all jobs should be entered into the computer as they are received. The ECM program will then batch all jobs that use the same rolls of paper together. This will save significant time and money as fewer paper roll swaps will be needed.

⚙️ **Significant amounts of cardboard are wasted in the cutting process.**

Situation: When box blanks are cut at the cutter, excess cardboard that does not fit the job pattern is discarded.

Significance: Lakota Cardboard is paying for paper and glue and time to create that cardboard; simply throwing it out increases our recycle fees and wastes money and resources.

Remarks/Recommendations: The ECM program can batch together jobs that use the same cardboard specifications, and create an efficient cutting pattern that will meet the needs of multiple jobs. Using the ECM software should result in less waste of cardboard at the cutting stage.

This sample is included in the [Proposal Kit Professional](#) and [Proposal Pack](#) products.

This sample has been truncated to only show the first few pages. The complete version of this sample including an editable Word version is included with all Proposal Kit Professional and Proposal Pack products found at:
